

How to Play

1. Children stand in pairs, back-to-back.
2. The teacher asks a simple question about the classroom, such as:
 - "What do you see in front of you?"
 - "What color objects can you see?"
 - "Who is closest to you?"
3. Each child quickly shares their answer. Most answers will be different because they are facing different directions. Some pairs will naturally think: "My answer is right!" "No, mine is right!"
4. The teacher then calls: **"Pause, Turn, Understand!"**
5. The children pause, turn around, look from their partner's position, and say: **"Now I see what you see!"**
6. Finish with everyone raising their hands and saying: **"Different views, one friendship!"**

Funny Version: If a child says, "I'm right!" before listening, everyone must do one silly owl turn and say: **"Hoo-hoo! Let me see your view!"**

The class usually laughs while remembering the lesson.

Reflection: Ask: Were the answers different? Did that mean someone was wrong? What happened when you looked from the other person's place? How can we do this with friends and family?

Class Chant: *"Pause, Turn, Understand... That's the Soul Blossom way!"*
